REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102 or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snow.

M One or more days of record missing, if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

General Weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402

ASHEVILLE: 1964

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: **103° on the 15th at Palm Springs**

Lowest Temperature: **-15° on the 3d at White Mountain 2**

Greatest Total Precipitation: **5.63 inches at Hoegees FC 60A**

Least Total Precipitation: **0.00 at 13 stations**

Greatest One-Day Precipitation: **3.83 inches on the 1st at Hoegees FC 60A**

Greatest Reported Total Snowfall: **37.0 inches at Giant Forest**

Greatest Reported Depth of Snow on Ground: **63 inches on the 1st at Twin Lakes**

SPECIAL WEATHER SUMMARY

Temperature: With but few exceptions temperatures averaged below normal in all parts of the State; departures ranged up to more than 3° in some areas. At Eureka the highest reading for the month was only 58°, the lowest monthly maximum for April since 1956. At Sacramento the minimum temperature on the 24th set a new low record for the date. Santa Maria had the lowest mean monthly minimum temperature for April since 1929 and the fourth lowest since the record started in 1906. Burbank reported a light frost on the 6th, the latest date it has ever been reported there and the first time to be reported in April. San Diego had below normal temperatures every day of the month except for six days near the middle of the period. There were occasional warm days, however, in some areas. New maximum temperature records were set on the 14th at Sacramento, Los Angeles, and San Diego, and on the 15th at Los Angeles.

Precipitation: Totals for the month were below normal at most reporting points, continuing a dry pattern that has been widespread and prolonged. Mt. Shasta City reports the driest April since 1916, the 5th consecutive month of below normal precipitation, and the driest December through April period since the winter of 1923-1924. Eureka experienced the driest April since 1956. The period from late November through April has been the driest at Red Bluff in a record that goes back to 1872. Sacramento, too, reports the 5th consecutive month with below normal precipitation.

Sunshine: Accompanying the dry weather was a greater amount of sunshine than usual. Red Bluff reported the second highest percentage of sunshine of any April in the records.

Storms: Rains on the 1st on the hills back of Carpenteria resulted in mud slides where fire had denuded the slopes the previous month. A dust and sandstorm on the 5th closed highways and sandblasted paint and windows of cars and homes in the Mojave Desert area. Power lines were blown down, shingles were removed from homes, and a parked plane was overturned at the Palm Springs Airport. A funnel cloud was reported north of Fresno on the 23d, and there was damaging hail on the same date in the Sonoma County area. A freeze on the 22d, 23d, and 24th damaged fruit and grapes, especially in the Napa Valley and in some sections of the Sierra foothills.

PREPARATION AND PUBLICATION OF THIS BULLETIN

Much of the data presented in this publication comes from observations taken by volunteer cooperative observers. These observations are mailed after the close of the month to the National Weather Records Center at Asheville, North Carolina, where they are checked for accuracy and placed on punched cards. These cards are used to prepare copy for the various tables. Printing and mailing is done at the Asheville Center.

The various steps all take time. Records for any state can not be checked by machine until nearly all of them for that state have been received. Printing can not be done until all tables and the text for an issue are completed and assembled.

Constant effort is made to speed up publication and still maintain high quality of the data. A realistic deadline for mailing the printed Climatological Data has been set as the 15th of the second following month (45 days after the end of the month for which data are published). If any recipient's copy is unduly delayed, the Director, National Weather Records Center, Asheville, North Carolina should be advised.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102 or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal total precipitation for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931 - 1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground Samples for obtaining measurements are taken from different points for successive observations, consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

– No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And on an earlier date or dates.

++ Fastest observed one minute wind speed. This station is not equipped with automatic wind instruments.

* Amount included in following measurement, time distribution unknown

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snow.

M One or more days of record missing. If average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month

VAR This entry in time of observation column in Station Index means variable.

General Weather conditions in the U S for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D C

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D C for $1 25 Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents

Subscription Price 20 cents per copy, monthly and annual; $2 50 per year (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402

ASHEVILLE: 1964

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: **108° on the 21+ at Death Valley**

Lowest Temperature: **-15° on the 7th at White Mountain 2**

Greatest Total Precipitation: **6.45 inches at Pacific House**

Least Total Precipitation: **0.00 inch at 18 stations**

Greatest One-Day Precipitation: **2.08 inches on the 5th at Posey 3 E**

Greatest Reported Total Snowfall: **71.5 inches at Twin Lakes**

Greatest Reported Depth of Snow on Ground: **63 inches on the 6th at Soda Springs 1 E**

SPECIAL WEATHER SUMMARY

Temperature: Mean temperatures below normal were reported from all parts of the State, with negative departures of more than 5° at some mountain stations. Frosts in April and May destroyed much of the fruit crop around Mt. Shasta and damaged many orchards in the central part of the State. At Red Bluff the temperature has been below normal for 14 out of the past 15 months, only February 1963 being above normal during that period. At Sacramento, the minimum on the 2d and the maximum on the 5th were the lowest ever recorded on those dates. The San Francisco City Office had the coldest May since 1899 and the third coldest since the record started in 1871. There were 49 consecutive days from April 16 through June 3 without an above normal mean temperature. At Santa Maria it was the coldest May since 1919 and the second lowest since 1900. Burbank reported the lowest maximum and minimum of record for the 5th, making it their coldest day in May, and unprecedentedly late snowfalls occurred in nearby foothill communities. It was the coldest May since 1946 at the Los Angeles City Office and the coldest May of record at the Airport. At the latter station a minimum of 45° for the month was the lowest May reading since 1942. San Diego had the lowest May mean temperature since 1933.

Precipitation: Much of the State received less than normal precipitation during May, although a few stations in the central and northern parts received somewhat more than normal. Mt. Shasta City was only .03 inch above normal, and this was the first above normal report there in the past six months. At Red Bluff there was only 4.92 inches of precipitation in the period from November 24, 1963, through May 1964; the least reported previously for this period was 8.08 inches in a record that goes back to 1872.

Storms: Minor wind damage was reported from the Los Angeles area on May 4. On the 20th a small whirlwind lifted the roof from a large storage shed in the Reedley vicinity; in falling the roof crushed four cars. Lightning damaged a home and some powerlines in the Sacramento area on the 26th.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the State Climatologist, Weather Bureau Office, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.
- \+ And also on an earlier date or dates.
- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- AR This entry in time of observation column in Station Index means after rain.
- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.
- G "Soil Temperature" table.
- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
- J "Supplemental Data" table.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- VAR This entry in time of observation column in Station Index means variable.
- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CORRECTIONS - Continued

April 1964	Climatological Data Table	White Mountain 2	Total precipitation 2.43, greatest day 1.16 on 19th, snowfall 15.4, no of days with precipitation .10 or more 6, .50 or more 1.
April 1964	Climatological Data Table	Southeast Desert Basins Division 7	Average precipitation .41, departure from normal -.16.
April 1964	Daily Precipitation Table	White Mountain 2	Total precipitation 2.43, amount on 1st .20, 2d .20, 3d .10, 4th trace, 5th .08, 6th .08, 7th thru 17th 0, 18th .04, 19th 1.16, 20th .24, 21st 0, 22d 0, 23d .08, 24th .08, 25th .17, 26th trace, 27th 0, 28th trace, 29th 0, 30th 0.
April 1964	Snowfall and Snow on Ground Table	White Mountain 2	Snowfall on 1st 2.0, 2d 2.0, 3d 1.0, 4th trace, 5th 1.0, 6th 1.0, 7th thru 17th 0, 18th 0.5, 19th 14.0, 20th 3.0, 21st and 22d 0, 23d 1.0, 24th 1.0, 25th 2.0, 26th trace, 27th 0, 28th trace, 29th and 30th 0. Snow on ground on 11th 0.
May 1964	Climatological Data Table	Sierraville RS	Average maximum temperature 61.5, average 47.1 departure -3.9, degree days 548.
May 1964	Daily Temperature Table	Sierraville RS	Average maximum temperature 61.5 maximum temperature on 31st 68

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the State Climatologist, Weather Bureau Office, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.

- \+ And also on an earlier date or dates.

- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

- * Amount included in following measurement, time distribution unknown.

- // Gage is equipped with a windshield.

- B Adjusted to a full month.

- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

- M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

- T Trace, an amount too small to measure.

- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- AR This entry in time of observation column in Station Index means after rain.

- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

- G "Soil Temperature" table.

- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

- J "Supplemental Data" table.

- SS This entry in time of observation column in Station Index means observation made near sunset.

- VAR This entry in time of observation column in Station Index means variable.

- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the State Climatologist, Weather Bureau Office, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.
- \+ And also on an earlier date or dates.
- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing. If average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- AR This entry in time of observation column in Station Index means after rain.
- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.
- G "Soil Temperature" table.
- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
- J "Supplemental Data" table.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- VAR This entry in time of observation column in Station Index means variable.
- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 119° on the 10+ at Death Valley

Lowest Temperature: 24° on the 29th at Bridgeport

Greatest Total Precipitation: 1.98 inches at White Mountain 2

Least Total Precipitation: 0.00 inch at 217 stations

Greatest One-Day Precipitation: 1.08 inches on the 6th at White Mountain 2

Greatest Reported Total Snowfall: Trace at Twin Lakes and Meyers 4 SW

See Reference Notes Following Station Index

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the State Climatologist, Weather Bureau Office, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.
- \+ And also on an earlier date or dates.
- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing, if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- AR This entry in time of observation column in Station Index means after rain.
- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.
- G "Soil Temperature" table.
- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
- J "Supplemental Data" table.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- VAR This entry in time of observation column in Station Index means variable.
- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the State Climatologist, Weather Bureau Office, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4 00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6.00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.

\+ And also on an earlier date or dates.

++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

* Amount included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

T Trace, an amount too small to measure.

V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

AR This entry in time of observation column in Station Index means after rain.

C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.

G "Soil Temperature" table.

H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

J "Supplemental Data" table.

S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.

SS This entry in time of observation column in Station Index means observation made near sunset.

VAR This entry in time of observation column in Station Index means variable.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CLIMATOLOGICAL DATA

CALIFORNIA

OCTOBER 1964
Volume 68 No. 10

ASHEVILLE: 1964

CALIFORNIA - OCTOBER 1964

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 108° on the 6+ at Death Valley

Lowest Temperature: 6° on the 25th at Bodie

Greatest Total Precipitation: 6.79 inches at Cazadero

Least Total Precipitation: 0.00 inch at 9 stations

Greatest One-Day Precipitation: 3.10 inches on the 28th at Cazadero

Greatest Reported Total Snowfall: 14.0 inches at White Mountain 2

Greatest Reported Depth of Snow on Ground: 14 inches on the 29th at White Mountain 2

SPECIAL WEATHER SUMMARY

TEMPERATURE: October 1964 was unusually warm over the entire State. Positive departures from the normal ranged from less than 1° at some central and north coast locations to nearly 6° in the Sierras. Many of the first order stations reported only 3 to 6 days of below normal temperatures during the entire month. At Burbank, this was the second warmest October of record, and at Sacramento it was the sixth warmest in a record going back to 1877. The maximum of 89° on the 22d at Sacramento equalled the record for that date, and new records were set for the dates in San Diego on the 19th and 20th. The 97° on the 19th at San Diego was the highest ever recorded so late in the fall, and was the warmest temperature observed there since September 1963. This was the first above normal monthly mean temperature at San Diego in 6 months and the greatest positive departure in over a year.

PRECIPITATION: Rainfall was limited, in most areas to the last few days of the month. Totals were greater than normal in most of the central-coastal and valley areas, but were below normal in the northern and southern parts of the State and along the Sierras. Fresno reported the wettest October since 1936, and Sacramento had the heaviest rainfall on the 28th and 29th ever recorded on those dates. The rain in Burbank brought to a close a period of 139 consecutive days without measurable precipitation.

The first rain of the season resulted in the usual power failures caused by the wetting of dust-covered insulators. Repair crews worked overtime for several days restoring service in some areas. The first snow in the high Sierras temporarily blocked transcontinental highways, but traffic was resumed after a few hours.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.
- \+ And also on an earlier date or dates.
- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing. If average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- AR This entry in time of observation column in Station Index means after rain.
- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.
- G "Soil Temperature" table.
- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
- J "Supplemental Data" table.
- S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- VAR This entry in time of observation column in Station Index means variable.
- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

NOVEMBER 1964
Volume 68 No. 11

ASHEVILLE: 1965

CALIFORNIA - SPECIAL WEATHER SUMMARY - NOVEMBER 1964

TEMPERATURE: November was colder than normal over the entire State, with negative departures ranging from only 1.2° at Eureka to as much as 7.4° at Blue Canyon. The average temperature for November has been lower within recent years at Eureka, Oakland, and Los Angeles, but at all other first-order stations it is necessary to go back a number of years to find temperatures as low. The following list indicates the latest year when the November mean temperature was lower than it was in 1964: 1922, Red Bluff; 1925, Mt. Shasta City; 1935, San Francisco Airport, Bakersfield; 1945, Blue Canyon; 1947 Sacramento City Office, San Francisco City Office, Bishop, Santa Maria, San Diego; 1952, Burbank; 1955, Fresno.

At Sacramento the mean maximum temperature was the 4th lowest for November since records began in 1877. Fresno reported the lowest minimum on the 15th and 19th ever recorded on those dates. At Santa Maria the mean maximum was the lowest since Weather Bureau records started in 1943, and the lowest since 1910 if the earlier cooperative record is considered. Daily average temperatures at Burbank on the 15th, 16th, and 17th, and the maximum of the 17th were the lowest ever recorded in November. At Los Angeles Airport, the maximum on the 17th was 7° lower than any maximum previously recorded in November, and the minimum of the 19th was the lowest in November since 1947. On the other hand, the maximum of the 30th was the highest in November in the past 5 years. The minimum on the 15th at San Diego was the lowest temperature ever recorded so early in the season.

PRECIPITATION: Over most of the State precipitation was greater than normal during November. Excesses of more than 7 inches were reported from both Eureka and Blue Canyon. Slight deficiencies were shown east of the Sierras, in the southern San Joaquin Valley, and in the Los Angeles and desert areas.

At Eureka this was the wettest November since 1926. The City Office in San Francisco had 14 days with measurable precipitation, a figure that has been exceeded only twice since 1913. The Sacramento City Office had 12 days with measurable precipitation, the 6th greatest figure for November since the record began.

STORMS: There were reports of 3 tornadoes during the month, but damage from them was slight. On the 1st, about 3:20 p.m., a tornado touched ground twice near the town of Alpaugh, some 40 miles northwest of Bakersfield. At 7:00 a.m. on the 9th a tornado was reported in the vicinity of El Segundo. This storm moved across Los Angeles Airport, but winds there did not exceed 40 m.p.h. Another tornado was observed at 1:34 a.m. on the 10th near Windsor, Sonoma County. Funnel clouds or waterspouts were reported by pilots on the 1st west of Santa Barbara and off Pt. Mugu, on the 9th south of San Diego, and on the 16th near the southwestern end of Santa Cruz Island, about 40 miles west of San Diego, and southwest of Los Angeles. Other wind damage was reported late on the evening of the 9th in Marin County.

Heavy rain on fire-denuded hillsides north of Santa Barbara and east of Burbank on the 9th created mudslides and damaged a number of buildings, roadways, streambeds, and utility lines. In the Sunset Canyon area, one woman was drowned, and her husband was injured.

TEMPERATURE AND PRECIPITATION EXTREMES

Highest Temperature: 93° on the 1st at Indio U S Date Garden

Lowest Temperature: -25° on the 18th at Bodie

Greatest Total Precipitation: 21.19 inches at Fort Dick 1 NNE

Least Total Precipitation: 0.03 inch at Mojave 2 ESE

Greatest One-Day Precipitation: D 4.80 inches on the 18th at Palm Springs Tramway

Greatest Reported Total Snowfall: 97.8 inches at Soda Springs 1 E

Greatest Reported Depth of Snow on Ground: 48 inches on the 13th at Soda Springs 1 E

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.

- \+ And also on an earlier date or dates.

- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

- * Amount included in following measurement, time distribution unknown.

- // Gage is equipped with a windshield.

- B Adjusted to a full month.

- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

- M One or more days of record missing. If average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

- T Trace, an amount too small to measure.

- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- AR This entry in time of observation column in Station Index means after rain.

- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.

- G "Soil Temperature" table.

- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

- J "Supplemental Data" table.

- S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.

- SS This entry in time of observation column in Station Index means observation made near sunset.

- VAR This entry in time of observation column in Station Index means variable.

- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

CALIFORNIA - DECEMBER 1964

SPECIAL WEATHER SUMMARY

Summary of Meteorological Conditions Associated with Heavy Rains in Northern California and Oregon, December 21, 1964, to January 5, 1965: For a few days prior to the torrential rains of late December 1964 a high-level jet stream associated with the surface storm track persisted over the northeast Pacific Ocean. This circulation flowed around the north side of the high pressure ridge over the Gulf of Alaska and thence southward to the latitude of central California. Storms following the jet stream had been producing intermittent precipitation in California north of the Tehachapi Mountains for several days.

On Sunday morning, December 20, the high pressure ridge was observed to be undergoing progressive erosion in the subtropics northeast of Hawaii. This allowed each storm to move across the Pacific at successively lower latitudes before turning toward California. Thus there was established a storm track extending from the western Pacific near Hawaii to northern California and Oregon. Storms on this track picked up huge quantities of heat and moisture from subtropical waters and transported them toward the west coast of the United States. Concurrently, there occurred a new outbreak of extremely cold air from the Arctic region. This cold air met the warm moist air about 1,000 miles west of northern California and intensified the storm systems as they moved rapidly toward the California coast.

Gale winds associated with each storm forced warm moist air over the Coast Range and then over the higher Cascades and northern Sierra Nevada to the east. Here expansional cooling released large quantities of moisture over the western slopes. Adding to this topographical rainfall-producing mechanism was the effect of the large scale meteorological circulation aloft. Both the topographical and the meteorological factors were near their extreme known values in the region of western northern California and Oregon.

During the period between Christmas and New Years Day the weather pattern changed to more northerly flow as a surge of rising pressure moved into the area northeast of Hawaii. There followed several days of heavy snow which extended down to low elevations, with intermittent rain and hail at sea level. On Tuesday, January 5, a relatively minor disturbance intensified near the northern California coast, producing a secondary period of rain. However, a strong high pressure ridge aloft moved into the region on January 7, and a series of weakening storms reaching the west coast after that date were of little significance.

William J. Denney
Meterologist
Weather Bureau Airport Station
San Francisco, California

Conditions in Northern California: November rains in the mountains of northern California totaled 10 to 15 inches in the central and northern Sierras and from 10 to 20 inches over the northern Coast Range and along the immediate coast. This was 150 to 250 percent of normal for the month. Occasional rains continued during the first half of December maintaining the saturated condition of the soil. Substantial snow accumulated at higher elevations of both the Coast Range and the Sierras, with the snow level near 4,500 feet in the northern Sierras and Cascades and around 5,500 feet in the central Sierras. The snow depth at 7,800 feet was reported to be 60 inches. Also, in some areas the top few inches of soil was frozen.

During the period December 18 through the 24 rainfall was at record or near-record levels over much of the northern and central Coast Range and the northern Sierra Nevada. Added to the snowmelt this rainfall caused rapid rises on streams draining the Coast Range and the Sierras and set new river stage and discharge figures at many points.

Preliminary estimates of the flood damages run into hundreds of millions of dollars. All major highways between California and Oregon were closed, as were highways through the Coast Range from the Pacific Ocean to the Sacramento Valley. Some of these will remain closed for several weeks while bridges and extensive sections of roadway are rebuilt. The railroad between San Francisco and Portland was closed by slides and washouts. Freight traffic was rerouted between these points, but passenger traffic was suspended for a period of about three weeks. All rail traffic across the Sierras was held up at the peak of the storm, and the Feather River Route will remain closed for some time until sections of the roadbed are reconstructed.

Details concerning forecast and observed water stages will be published by the Weather Bureau in the National Climatological Data and the Daily River Stages, and discharge figures will be prepared and published by the U. S. Geological Survey. It is likely that special reports on this flood situation will be prepared by a number of agencies.

December Precipitation: For the month of December as a whole precipitation in the drainages of the north coast averaged about 260 percent of normal, the pattern ranging from 210 percent in the Russian River watershed to 300 percent in the Klamath basin. The Sacramento Valley drainage as a whole averaged 290 percent of normal, while in the Yuba basin the figure was 400 percent.

SPECIAL WEATHER SUMMARY - Continued

Along the central coast December rainfall was 135 percent of normal, and the San Joaquin drainage received 205 percent of normal. South of the Tehachapis, however, rainfall was only 60 percent of normal.

The Storm in Northwestern California (Eel, Klamath, Smith, Van Duzen, Trinity, Mad, and Salmon Rivers and Redwood Creek): Stages and discharge figures on most of these streams exceed all previous records, in most cases by substantial amounts. A number of small communities in the path of the flood waters were washed away, and others suffered major damage. More than 25 major highway bridges were destroyed, and many sections of highways, including recently completed freeway, were washed away.

Rainfall totals for the 7-day period, December 18-24, were from 6 to 15 inches along the immediate coast but increased rapidly with elevation to as much as 32 inches in the coastal mountains. These figures are from 110 percent to 150 percent of the December 1955 figures for a 7-day period.

All rescue and rehabilitation operations during the 3 or 4 weeks following the peak of the flooding were carried on by air and water, with supplies being delivered to Eureka by barge and by large aircraft. Further distribution was dependent upon small aircraft and helicopters using temporary and makeshift landing facilities. This operation was often impeded during the first 10 days by poor weather, low visibility, and snow. Many schools will remain closed for an extended period because of damaged buildings and the impossibility of surface travel in the area.

Provisional data available at this time indicates that river stages were as much as 10 to 15 feet higher than they were in 1955 at many gaging points. At Alderpoint, the Eel River rose approximately 90 feet above its normal low point.

The Storm Along the Central Coast (Russian River): Coyote Dam, built since the 1955 flood, helped to reduce flood damage downstream in the Russian River by impounding much of the flow of the East Fork. Rainfall over the rest of the drainage, however, was heavy enough to cause damage from flood stages comparable to the record-breaking December 1955 flood, all the way from Ukiah to the mouth of the river. The most serious flooding occurred where the river channels through the Coast Range from Mirabel Park westward to Monte Rio. Through this reach of the river many homes were destroyed, and roads and bridges were damaged. The town of Guerneville suffered major damage with water up to 4 feet deep in many business establishments. Heavy snow at higher elevations following the period of peak flooding complicated rescue and repair operations.

Rainfall totals in the Russian River basin amounted to as much as 20 inches in the 7-day period from the 18 to the 24. Totals for 24 hours were as great as 9.7 inches; 48 hour amounts were up to 14 inches; and 72-hour totals equalled 16.9 inches at some reporting points.

The Storm in the Northern Sierra Nevadas (Feather, American, and Yuba Rivers): Rainfall amounts in some of this area exceeded the 1955 totals, and runoff set new records on all three streams, but recent progress in the construction of dams in these basins helped to control flood waters and reduce damage. Seven-day totals of rainfall amounted to 30 inches or more at higher elevations in the mountains, and they were generally 10 inches or more even at low levels.

While local flooding occurred downstream there was no major damage in the Sacramento Valley. In the mountains, however, a number of bridges were lost, and sections of highway and railroad track were washed out. Emergency ferry service was substituted at the site of the submerged bridge at Bidwell's Bar.

Other Areas in the State: Further south in the Coast Range and in the Sierras there was local flooding along streams, but damage was not great. Some of the islands in the Delta Region were inundated when levees gave way. Transit of ocean-going vessels through the delta channels was delayed during periods of high tide to avoid danger of breaching levees.

TEMPERATURE AND PRECIPITATION EXTREMES

HIGHEST TEMPERATURE: 89° ON THE 1ST AT INDIO U. S. DATE GARDEN

LOWEST TEMPERATURE: -12° ON THE 31ST AT WHITE MOUNTAIN 2

GREATEST TOTAL PRECIPITATION: 48.07 INCHES AT BRANSCOMB 2 NW

LEAST TOTAL PRECIPITATION: 0.00 INCH AT 15 STATIONS

GREATEST ONE-DAY PRECIPITATION: 11.80 INCHES ON THE 22D AT TURNTABLE CREEK

GREATEST REPORTED TOTAL SNOWFALL: 225.0 INCHES AT TWIN LAKES

GREATEST REPORTED DEPTH OF SNOW ON GROUND: 115 INCHES ON THE 31ST AT TWIN LAKES

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS: Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65° F. In "Supplemental Data" table directions entered in figures are tens of degrees.

OBSERVATION TIME: The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time. Snow on ground in the "Snowfall and Snow on Ground" table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m., P.S.T., except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB, which are taken at 6:00 a.m., P.S.T., and Mt. Shasta WB City at 8:00 a.m., P.S.T. Data in the "Extremes" table, "Daily Precipitation" table, "Daily Temperature" table, "Evaporation and Wind" table, and snowfall in the "Snowfall and Snow on Ground" table, when published, are for the 24 hours ending at time of observation.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" table. Max and Min in "Evaporation and Wind" table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

WATER EQUIVALENT values published in the "Snowfall and Snow on Ground" table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

SNOWFALL: Entries of snowfall in the "Climatological Data" table, the "Snowfall and Snow on Ground" table, and in the "Seasonal Snowfall" table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

NORMALS for all stations are climatological standard normals based on the period 1931-1960.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

SEASONAL TABLES: Monthly and seasonal snowfall and heating degree days for the 12 months ending with the preceding June data will be carried in the July issue of this bulletin.

DELAYED DATA AND CORRECTIONS will be carried only in the June and December issues of this bulletin.

INTERPOLATED VALUES for monthly precipitation totals may be found in the annual issue of this publication.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- \- No record in the "Supplemental Data" table, "Daily Precipitation" table, "Evaporation and Wind" table, "Snowfall and Snow on Ground" table, and the Station Index.

  No record in the "Climatological Data" table and the "Daily Temperature" table is indicated by no entry.

- \+ And also on an earlier date or dates.

- ++ Highest observed one minute windspeed. This station is not equipped with an instrument to measure fastest mile data.

- * Amount included in following measurement, time distribution unknown.

- // Gage is equipped with a windshield.

- B Adjusted to a full month.

- D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

- M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

- T Trace, an amount too small to measure.

- V Includes total for previous month.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- AR This entry in time of observation column in Station Index means after rain.

- C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in the "Hourly Precipitation Data" bulletin. If daily amounts are published in "Climatological Data" bulletin they are from a separate non-recording gage, except where indicated by reference 'R'. Such amounts may differ from amounts published from the recording gage in the "Hourly Precipitation Data" bulletin.

- G "Soil Temperature" table.

- H "Snowfall and Snow on Ground" table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.

- J "Supplemental Data" table.

- S Storage precipitation station. Precipitation measurements, made at irregular intervals will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.

- SS This entry in time of observation column in Station Index means observation made near sunset.

- VAR This entry in time of observation column in Station Index means variable.

- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, this reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

Stations appearing in the Index, but for which data are not listed in the tables, were either missing or received too late to be included in this issue.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication "Substation History" for this State, price $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, price 15 cents. These publications may be obtained from the Superintendent of Documents at the address shown above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

(A) HOLTVILLE SILTY CLAY, BARE GROUND, EXPOSED TO SUN, LEVEL SURFACE. DATA FOR THE 4- AND 8-INCH DEPTHS FROM THERMOGRAPH. MONTHLY AVERAGES AT THESE DEPTHS ARE AVERAGES OF DAILY MAXIMUM AND MINIMUM VALUES. DATA FROM OTHER DEPTHS ARE FROM MERCURY-IN-GLASS THERMOMETERS. MONTHLY AVERAGES FROM THESE DEPTHS ARE AVERAGES OF SINGLE READINGS AT TIME SHOWN.
(B) SANDY LOAM - UNDER BARE GROUND SURFACE. DATA FROM SOIL THERMOGRAPH.
(C) RAMONA SANDY LOAM. DATA FROM AIR AND SOIL THERMOGRAPH.
(D) RAMONA SANDY LOAM UNDER THE EAST SKIRT OF A VALENCIA ORANGE TREE, SHADED AND UNDER REGULARLY IRRIGATED SOIL. DATA FROM AIR AND SOIL THERMOGRAPH. MONTHLY AVERAGES AT DAVIS 1 WSW AND RIVERSIDE CITRUS EXPERIMENT STATION ARE AVERAGES OF DAILY MAXIMUM AND MINIMUM VALUES. EXTREMES ARE THE HIGHEST AND LOWEST OBSERVED AT THE TIME INDICATED OR THE HIGHEST MAXIMUM AND THE LOWEST MINIMUM AVAILABLE.

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco, California 94102, or to any Weather Bureau Office near you.

DIMENSIONAL UNITS. Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles.

EVAPORATION is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the Evaporation and Wind table. Max and Min in Evaporation and Wind table refer to extremes of temperature of water in pan as recorded during 24 hours ending at time of observation.

NORMALS for all stations are climatological normals based on the period 1931-1960. "DEP" in Table 4 refers to departures from long-term means based on periods varying from 10 to 29 years which are used in place of normals. Except $ indicates standard normals used for Newark departures.

DIVISIONS, as used in this publication, became effective with data for January 1941.

STATION NAMES: Figures and letters following the station name, such as 12SSW, indicate distance in miles and direction from the post office.

DELAYED DATA AND CORRECTIONS will be carried in the June and December issues of Climatological Data.

IN THE DATA TABLES THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- \- No record.
- \+ Also on earlier date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Amount is wholly or partially estimated.
- M One or more days record missing; if average value is entered, less than 10 days record is missing. See monthly Climatological Data for detailed daily record.
- R Amounts from recording gage. (The amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month. V in annual column means total is for a two-year period.

IN THE STATION INDEX THE SYMBOLS AND LETTERS WHEN USED INDICATE THE FOLLOWING:

- # Thermometers are generally exposed in a shelter located a few feet above sod covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
- C Data for recording rain gage stations processed for special purposes and published in Hourly Precipitation Data. Length of record for recorder-only stations may be found in the annual issue of Hourly Precipitation Data.
- G Soil temperatures published.
- S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published later in "Precipitation Data from Storage-Gage Stations" Bulletin.

Years of record as shown in the Station Index are approximate since gaps in records may not have been considered in arriving at the totals shown.

Information concerning the history of changes in location, elevations, exposures, etc., of substations through 1957 may be found in the publication "Substation History" for this State. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402, for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issue of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.
